

## **NEW! Environmentally friendly MAIL LITE®**

A new version of Mail Lite will be released as of March 1, 2020 and the old version will eventually be completely replaced.

Sealed Air is constantly working to reach its goals with their solutions being 100% recyclable during 2025. As a step in this work, a new design has been selected for the entire Mail Lite series where you have 2 components, and both are recyclable. This is achieved by using FSC® certified paper which is also uncoated (non-coated Kraft Paper) and that the co-extruded bubble wrap is made of at least 60% recycled material.

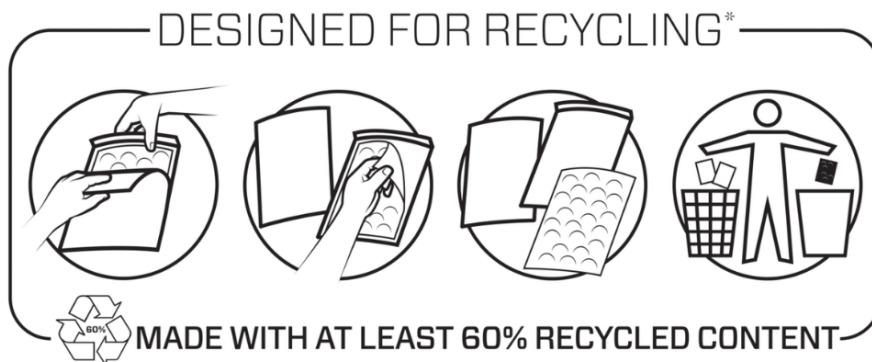

### What is the difference between the new and old mailers?

- **New paper**  
The PE coated paper is replaced with non-coated Kraft Paper (FSC® certified paper that can easily be recycled in the paper waste stream
- **Less laminated**  
The AirCap® bubble liner is now welded around the top, sides and bottom of the bags opposed to a full lamination which prevents the bags from being recycled.
- **60% recycled content**  
The AirCap® bubble contains a minimum of 60% recycled content.

### How to recycle the new Mail Lite® White and Gold?

The inner bubble can easily be separated from the outer paper for recycling, making the new mailers environmentally friendly without compromising performance.

### Other information

- The old version will completely stop being manufactured
- No part numbers will change
- No prices will change
- The release of the new version is as of March 1, 2020.
- Boxon will gradually get the new version in stock. Different sizes will go faster to change than others. We will eventually replace the old version completely.
